libera SPACE

The workplace for public teams, on servers they choose.

Open source, from Abilian

A team's work is everywhere at once.

The latest version is in someone's mail. The minutes are on a drive. The decisions are in a chat, and the deadlines in a spreadsheet only one person keeps. Or all of it sits in a cloud the administration doesn't control.

Attachments, version 7 final

A shared drive

A chat thread

A spreadsheet of who does what

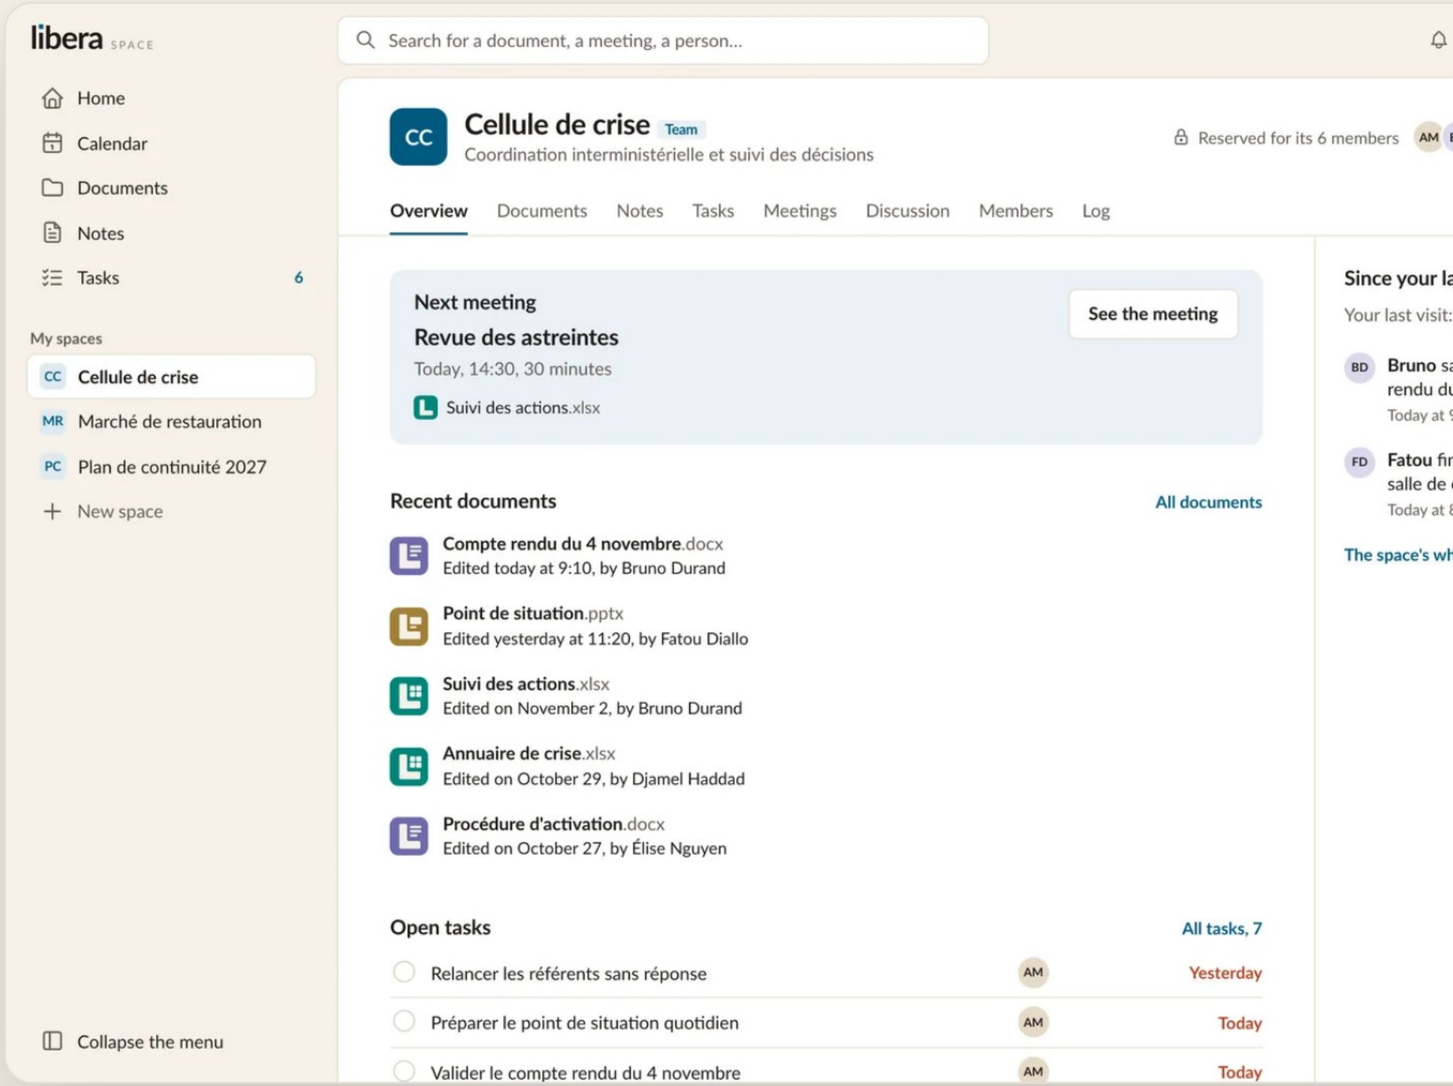

A video link, somewhere

One space for the team

A space for every team.

A project, a service, a crisis cell: each gets a space, reserved to its members.

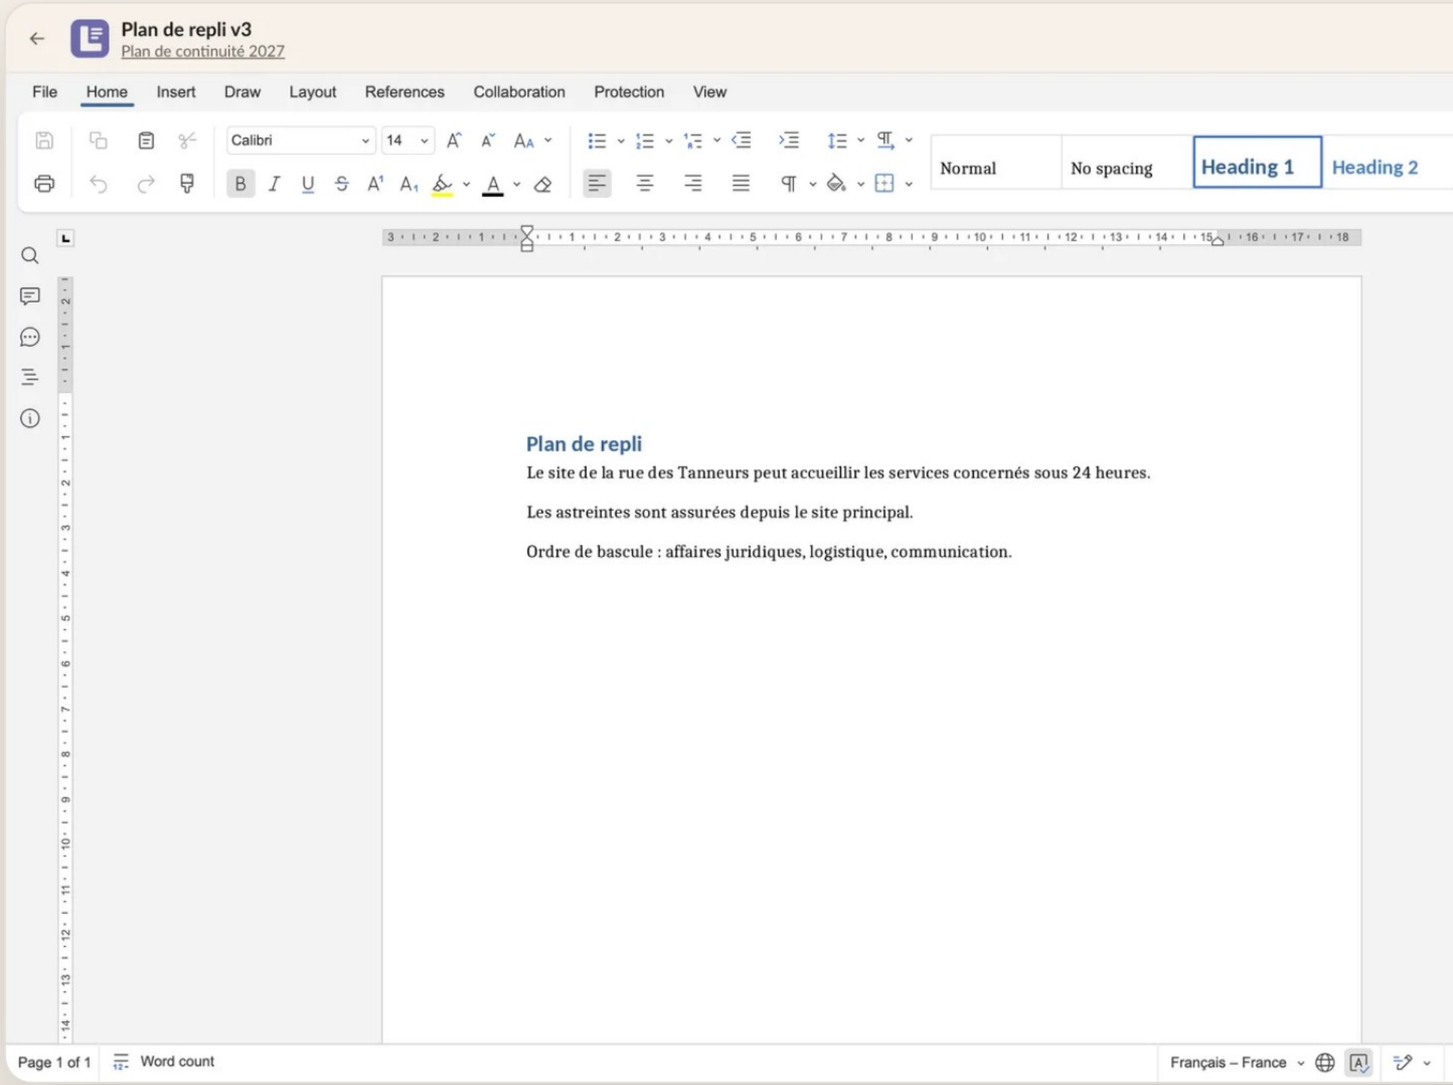

- Documents and their versions, notes, tasks and meetings, together
- What changed since you last looked
- Who can open what, said in one sentence

Write together, in the browser.

Word, Excel and PowerPoint files, and their open ODF equivalents, edited by several people at once.

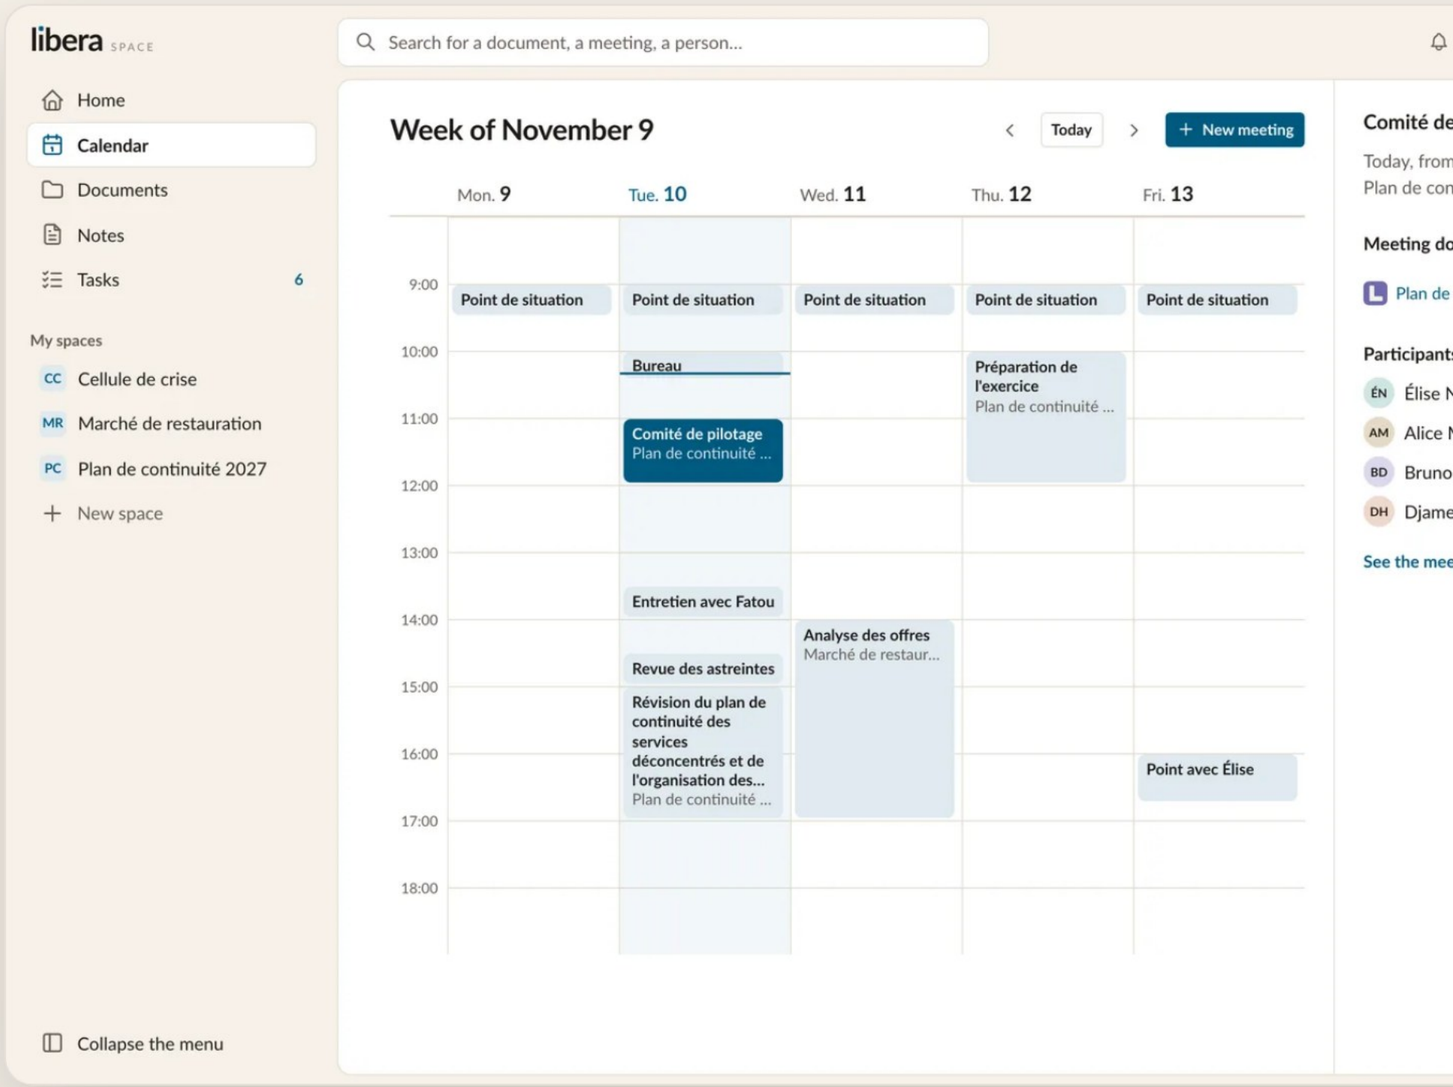

- Nothing to save: every session becomes a version
- Comments and tracked changes, as on the desktop
- The same files on your computer, with Libera Suite

Meetings that lead somewhere.

The week at a glance, times when everyone is free, and the papers for each meeting.

- Join in Visio from the meeting, minutes start as a note
- Tasks with names and dates, on each team's board
- Every morning, what today holds for you

Yours to run, yours to leave.

On your servers

It runs where you decide, and reaches no service outside your control.

With the State's tools

ProConnect to sign in, Tchap to talk, Visio to meet, used as they are.

Open, through and through

Apache 2.0, open formats, and any space exported whole at any time.

For everyone

Designed for keyboards, screen readers and zoomed pages, following the RGAA.

In development, open to pilots: abilian.com
